AVID Users Group Meeting – Thursday, January 29, 2009
Sonny Tohan: Mac Business Solutions – host of this meeting

Dave Hemley:

He is the senior business development Manager for Adobe and also runs his own business called Digital Imaging/Digital Video
His contact information is dhelmly@adobe.com or 410-267-1270
www.blogs.adobe.com/davtechtable

Dave demos the Adobe Creative Suite 4 (CS4) – production premium, cost @ $1699
Adobe Premiere Pro CS4, v4.0.1

Dave announces that there is a new plug-in in CS4 that will allow you to import your AVID projects. With this plug in you can attach to your Avid servers and works with them in the Avid workflow.

Vista64 is highly recommended for PC Users, as opposed to regular Vista32.

DVCPROHD – uses P2 card to store media
You can mix P2, Red and XDCAM footage on the timeline in premiere pro and you can play directly off from the P2 card.   This also works if you have a camera with a hard drive in it where you have your footage stored.

You can switch back and forth between software programs like Encore, Photoshop, Premiere and Onlocation easily but you will have to make sure the computer is running with 4 GB of RAM minimum on the Mac.

www.tv.adobe.com - adobe media player is like a TiVo to save shows and clips
